Conclusion and Future Works

What is Kickstarters?

Kickstarter is a crowdfunding platform for creative projects.

If people like the project, they can pledge money to make it happen.

If goal is reached until time expires project is successful!

Who we are:

Sandra and Marvin are Data science trainees coming from different disciplines, concentrating their skills to solve crowdfunding project issues.

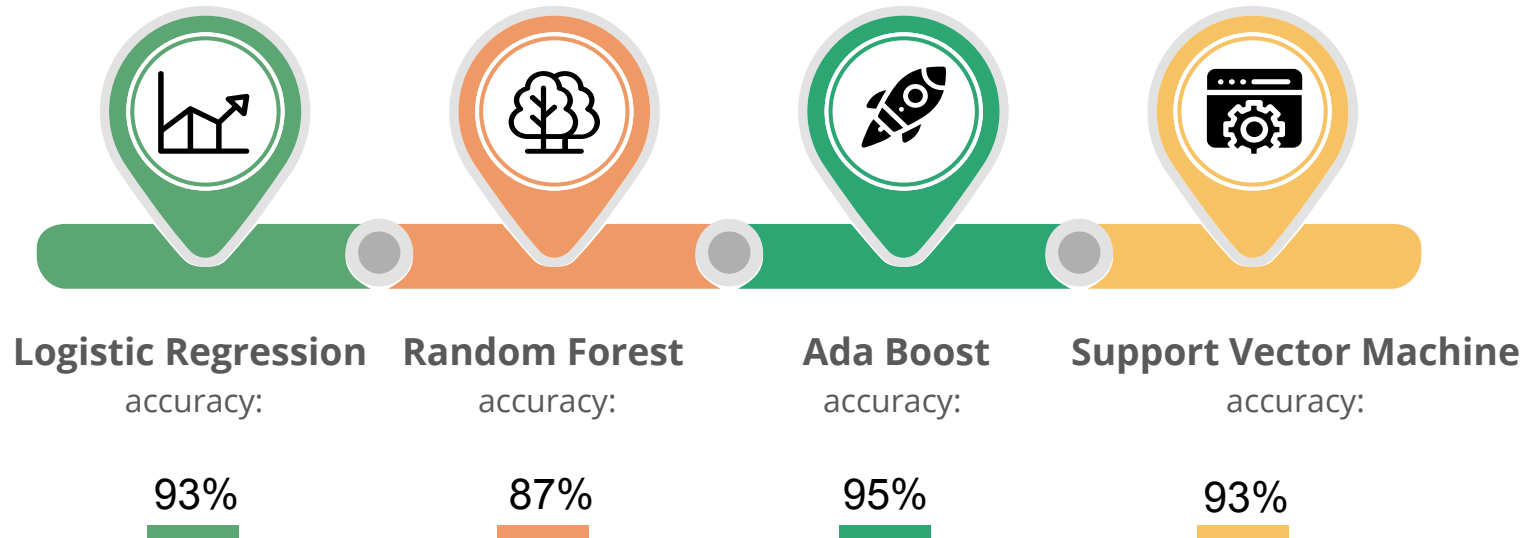

What we offer:

- Find out which probability your project has to get funded.
- Give advice what can help to improve chances.

Prediction Models

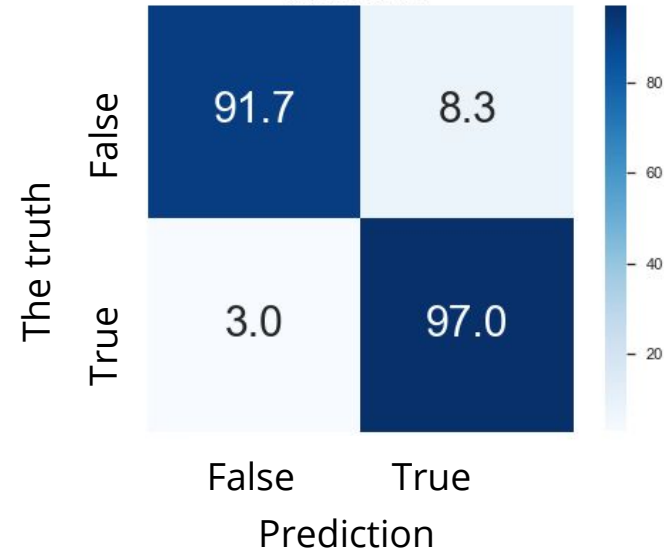

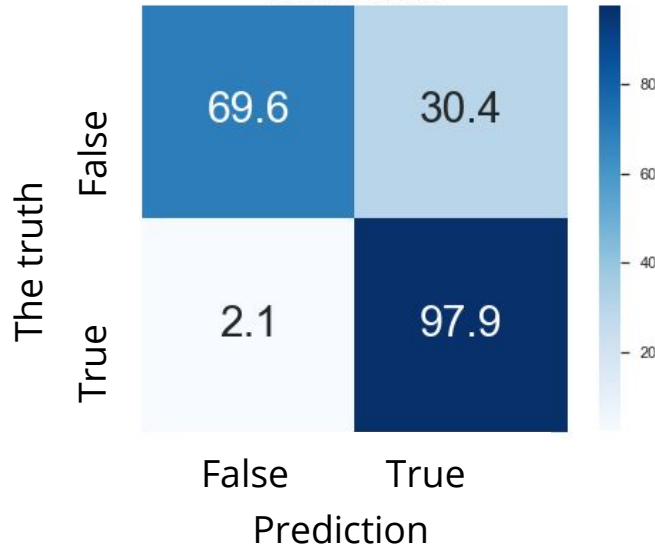

Confusion Matrix

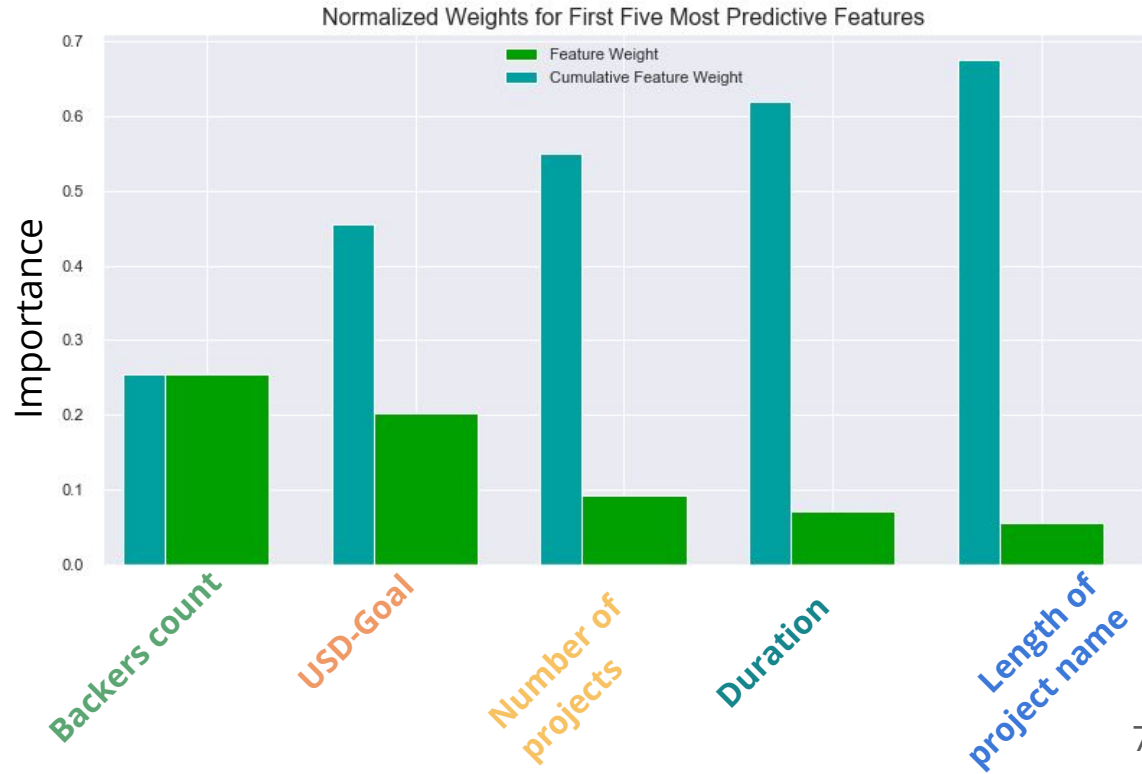

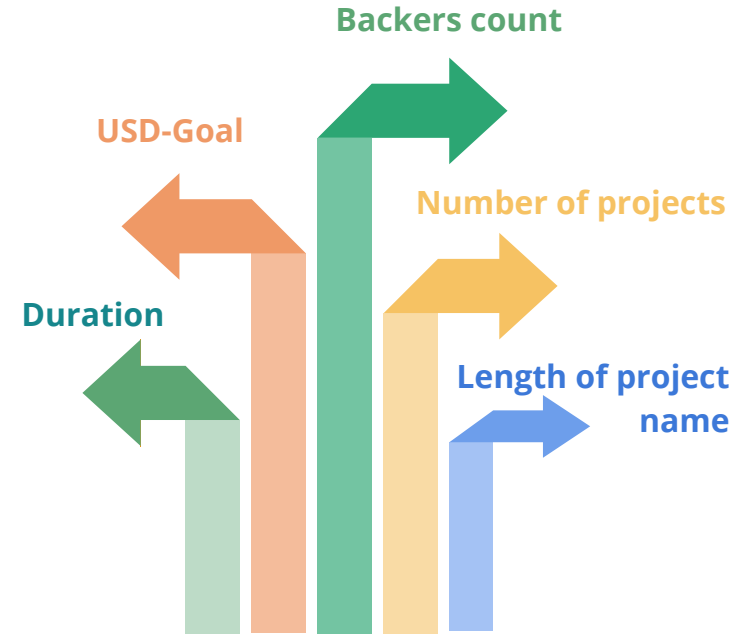

Random

Ada Boost

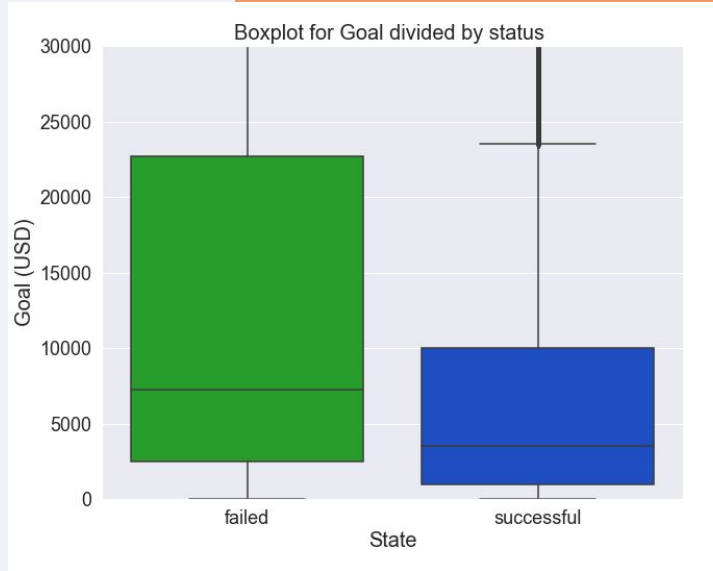

The Big 5

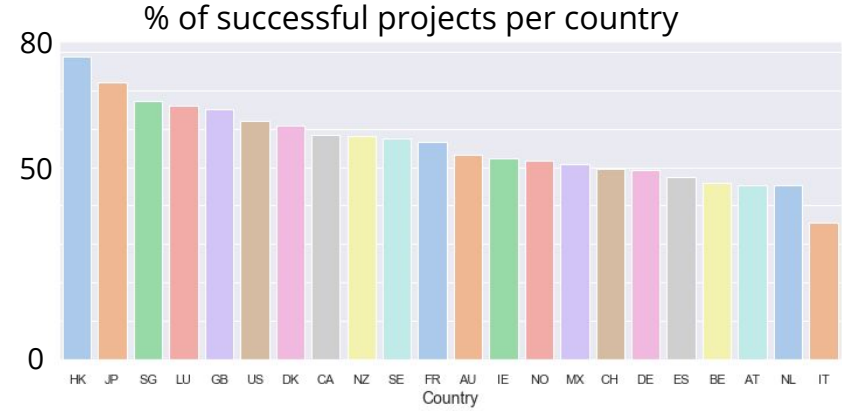

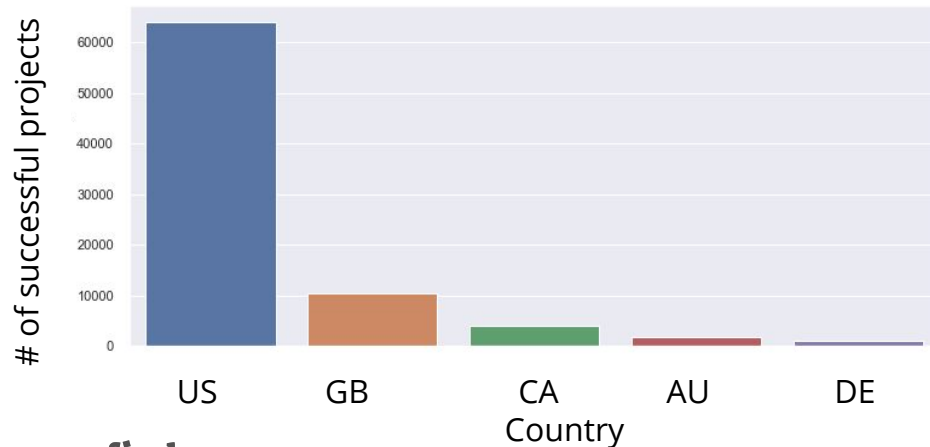

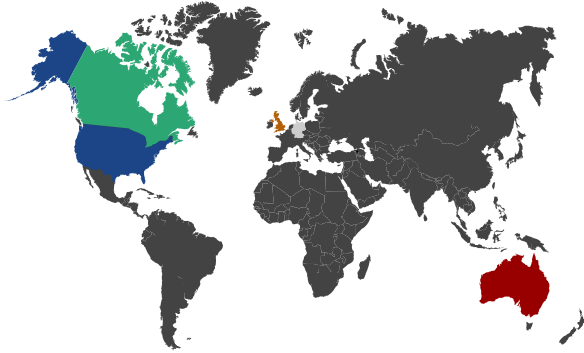

The Goal issue

- The median is significantly lower for successful projects
- The third quartile is significantly higher for failed projects

Success Rates of countries

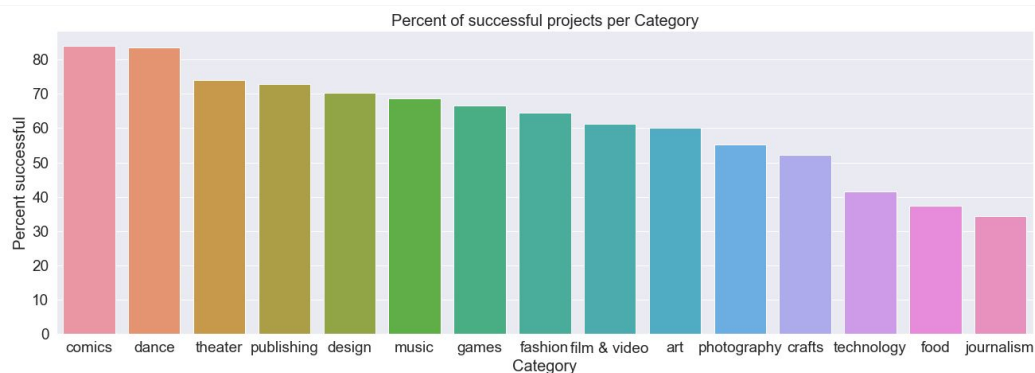

USA

Most successful project are originated in the USA

Hongkong

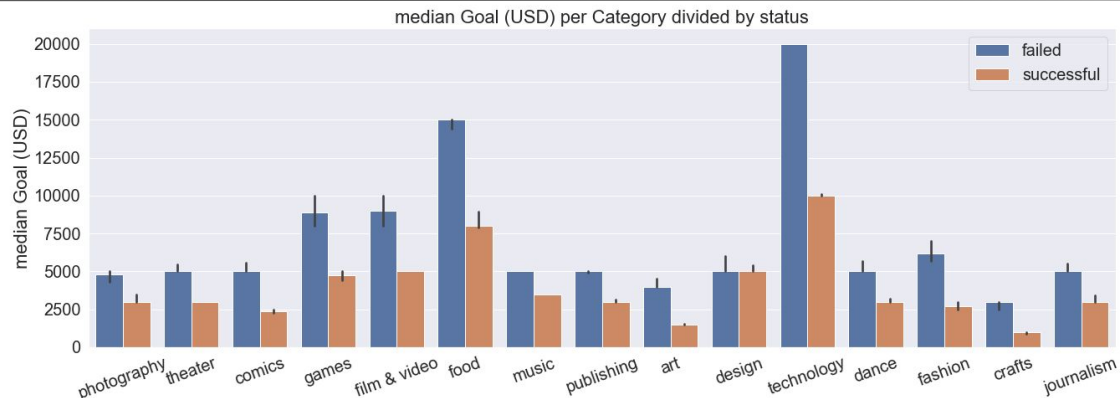

Related to the number of projects at all from a country, Hongkong has the highest rate of success

Impact of the Category

- comics, dance and theater are the categories in which the most projects are successfully completed
- technology, food and journalism are the categories in which the fewest projects are successfully completed

- the categories comics, dance and theater have a median Goal is smaller than 5000 USD
- the categories food and technology have the highest median Goal also for failed and successful projects

Conclusions

The top four advices, which helps to improve chances for your Kickstarter project:

1. Don't choose your goal too high
2. Try to get many backers
3. Rather start many small projects than a big one
4. What are the condition in your country and category?

Future Work

Backers Count

Analyse how backers count is affected, i.e. which variables would increase it

Data

Check data for further cleaning and new potential variables

High Performance

Take a look on these projects which have collected more money as they initial wanted

Thank you for your attention!
